INTRODUCTION

Based on the positive experiences of the previous eight conferences and confirmed legitimate need to gather experts and scholars from the fields of management and safety, with the aim of further improvement of the cooperation, methodologies and synergies of these two areas, it is organized 9th Conference “Management and Safety - M&S 2014”.

The program cycle continues and finishes “Basic management functions and safety” and the following last theme of the cycle is “Controlling and Safety”.

Controlling, as the fifth basic management function, integrates all management roles (information, interpersonal, decision making) and all safety functions (protection, defense and rescue).

Controlling refers to all areas of modern occupational and public safety of people, property and the environment (occupational safety and health, fire and explosion protection, environmental protection, physical and technical protection of persons and property, civil protection, defence, information system protection, financial protection, insurance, etc.), as well as the international standards for risk and safety and security management systems, and all that based on common goals of improving safety and welfare of people, organization, environment and society.
